

ABSTRACT

An electronic gaming console is illustrated having a console cabinet 10 including a prize display 12, a coin entry slot 13, a payout tray 14 and internally mounted game control processor circuits. A video game is provided for play on the console in which images of objects (balls) are dropped through a series of obstacles (pins) and eventually fill a number of containers. Prizes are paid according to either the number of balls which are in each container at the end of the ball drop and/or the manner in which the pins are hit
